VPS
com

Your Winning Edge

VPS.com Pte. Ltd. was originally founded in 1995 as Vanda Professional Services (S.E.A.) Pte. Ltd., the software and services arm of the Hong Kong listed Vanda Group. The company was bought in its entirety by the existing management team in 1999 and renamed to VPS.com Pte. Ltd. Our current focus is on the Singapore market. However we have some customers for whom we carry out regional projects as well as some customers in Europe and the U.S.

Our Products and Services

Our lines of business include the following:

Business Intelligence Solutions

VPS provides a complete range of consulting, hardware, software packages and integration services to implement Business Intelligence solutions for our customers in diverse areas of business. We represent products from IBM, Hyperion Software Inc. and Brio Technology and are the winner of the IBM Significant Contribution Award for Business Intelligence tools in 1999. All of the tools are web-enabled, allowing local or remote access to applications. These solutions provide graphical and numeric data to enable management decisions to be made based on factual information.

ERP Solutions

We provide a fully integrated Enterprise Management Solution based on PRONTO Software. PRONTO Software has enabled over 1,000 customers worldwide to maximize productivity, streamline their supply chain and deliver superior customer service. With a deserved reputation for being easy to work with at every level, PRONTO-Xi solutions offer flexible, scalable performance and a strong base from which to achieve an accelerated return on investment.

PRONTO Software's fully integrated solutions are available for key business functions: Financials, Supply Chain, Retail, Manufacturing, Project Costing Management, Service Management, Relationship Management (CRM), e-Business, Facility Management and Business Intelligence. These solutions are designed to ensure that all companies – small, medium and large – are provided with cost effective tools that translate existing business models and processes into an appropriately scaled information system.

Banking and Finance Sector

VPS has a strong background in providing consultancy and software solutions to the Banking and Finance sector in Asean/South Asia and Eastern Europe. We also develop our own Banking products aimed at wholesale banks of all sizes. On top of that, we have specialized systems dealing with the requirements of Private Bankers and Funds Managers to enable the active management of customer investment portfolios. Our InterBank/400 package provides a comprehensive solution for banks engaged in Foreign Exchange Trading, Securities Trading, Inter-Bank and Commercial Loans and Deposits, Trade Finance and focuses on the needs for managing risks in this environment. Additionally, we have recently launched a number of products, MASmart and HKmart, aimed at automating the reporting to the Local Central Bank. These products, initially for Singapore and Hong Kong, automate the process of extraction from source system, calculation of all figures and ratios and producing finished reports for submission to the Central Bank.

Other products have been developed for specific banks including a Management Accounting suite added onto their standard banking system and a system for managing Accounts Payable for banks, which processes cheques and interfaces to the accounting system. We also have extensive experience developing Head Office and Management Reporting for a variety of banks.

Business Continuity Services

Our office in Ubi Techpark includes a variety of IBM and other machines allowing our customers to continue 'Business as Usual' in the event that a disaster strikes their own premises. We also provide data storage to keep a copy of your important computer backups away from your own office so that a copy is available if anything happens to your office. You can choose how often you want to send your backups off-site. We offer a daily (Monday to Friday) pickup and delivery service from and to your office.

company profile

Miscellaneous Software Products and Services

Over the years, we have developed a number of purpose built software products such as Job Accounting Analyzer/400, Archive Record Manager, Risk Management reporting and other software that can easily be tailored to meet the needs of existing and new users. We also carry out turnkey projects for customers within our fields of expertise. These projects include web-site design and other Internet services.

Hardware/Network Solutions

Whether you want to buy a laptop or desktop computer, server, or need a complete network, we provide not only the equipment and services needed to set it up, but we can also assume responsibility for administering your entire installation. This can also be extended to corporate e-mail hosting internally or through public services. In short, we can provide for all your needs from a single source.

Our Capabilities

At VPS, we pride ourselves to being able to customize the appropriate IT solutions for each of our business partners and customers, enabling them to make the right linkages for a secure environment. Our staff includes people with strong banking experience as well as technical staff to enable us to meet the needs of different types of companies.

Our capabilities lie in:

- As a total business solution provider, we believe in working with our customers from the moment they embark on setting up a regional processing center. We assist with the entire setup from network planning and implementation to moving software applications to the new regional system. We can also assist in the setup of all terminals, printing equipment, SWIFT and other access equipment required.

Your Winning Edge

- As an experienced systems integrator, we are also able to install popular banking and ERP packages and integrate them with other systems or with our own software and tools that we sell.

- We provide organisation planning, installation, integration and on-going support for Local Area Networking applications of all kinds. Our expertise covers network operating systems such as Novell, Windows NT/2000/2003 Server, Unix, Linux, AS400 and others.

- Organisation planning, installation and integration services for Wide Area Networking needs. We can support all aspects of setting up and operating a regional network hub, regardless of business nature.

- Premises planning, installation and integration services for your computer room, cabling and other technology dependent areas of your organization.

- Supplying our own software package to analyse and track usage of the IBM iSeries (AS/400) hardware resources over a period of time. Our Job Accounting Analyser/400 package is used by a number of large organizations that wish to have a verifiable basis for allocating the costs of machine usage within the organization.

- Supply of personnel on short, medium and long term contracts to bring extra resources and expertise to facilitate the completion of your projects.
